## GENERAL INSTRUCTIONS FOR "CHOPPER"

1. INSTALLATION:
  - A. Fasten leg levelers to four legs and attach to cabinet with provided bolts.
  - B. Prepare helicopter for flying:
    1. Open both rear doors.
    2. Remove rear scenery panel. Four wood screws hold it in place.
    3. Remove shipping bracket holding helicopter to playfield.
    4. Attach counter weight (shipped in coin box). Position counter weight even with edge of tape and lock in place with nut. This position has been adjusted at the factory for best flying conditions.
    5. Reassemble rear scenery panel.
  - C. The power is controlled by a switch located in the rear corner on the bottom of the cabinet. Plug into A.C. only, 115 volts, 60 cycles. In low line areas (100 volts or less), a boost in the output voltage of the transformer may be achieved by removing the wire from the 115 volt tap of the transformer and re-wiring to the 105 volt position.
  - D. In the event the game is tilted or the line cord is removed, any credits accumulated will be reset to zero.
2. EXTENDED PLAY ADJUSTMENT:

Located on Logic Board (PC 583-904) and is adjustable from 5 to 14 hits by re-wiring jumper as indicated on the board. Extended play awards 50% additional flying time.
3. COIN ADJUSTMENT:

Located on Logic Board (PC 583-904) and may be adjusted from 1 to 4 coins per play by re-wiring jumper as indicated on the board.
4. PLAYS PER COIN:

Located on Logic Board (PC 583-904) and may be adjusted to 1 or 2 plays per coin by re-wiring jumper as indicated on the board.
5. TIME ADJUSTMENT:

Located on Logic Board (PC 583-904) and may be adjusted at 1 minute to 2 minutes 40 seconds, (that is 1 minute 1st position, 1.20 – 1.40 – 2.00 – 2.20 – 2.40 last position), by re-wiring as indicated on the board (→ increase).
6. PLAYFIELD SERVICE SWITCHES:

Located on mech panel. To service, follow instructions in back-box area.
7. PHOTO-CELL SENSITIVITY CONTROLS:

Located on Photo-Cell Detector (PC 583-924) on the lower back door. To increase sensitivity (makes target easier to hit), rotate controls as indicated.
8. VOLUME CONTROLS:

Located on Amplifier (PC 583-926) on lower back door. To increase volume, rotate as indicated.

## GENERAL ADJUSTMENT INFORMATION FOR "CHOPPER"

These adjustments are to be made only if the game malfunctions.

### 1. PITCH CONTROL LINK:

With the pitch control handle (right handle) at its center position (straight up), adjust the thread portion of the link until the helicopter rises vertically "only", when power is applied (a slow drift is okay).

### 2. POWER CONTROL POT:

A. Disconnect motor speed edge connector (PC 583-913).

B. Adjust (5k) copter pot (left handle) for 250 ohms.

(1) Connect ohm meter between G-R and W-G at pot.

(2) Loosen set screw and remove gear.

(3) Rotate pot to 250 ohms.

(4) Replace gear, tighten set screws and connect jack at PC 583-913.

C. Connect D.C. volt meter across copter wipers and adjust trim pot on copter motor speed (PC 583-913) to 2 V.D.C. at zero handle position. With handle at full power, meter should read 5 V.D.C.

### 3. SOUND POT ADJUSTMENTS:

A. Remove amplifier edge connector (PC 583-926).

B. Adjust pot to 250 ohms (left handle).

(1) Connect ohm meter between W-B and BLU-W at pot.

(2) Loosen set screw and remove gear.

(3) Rotate pot to 250 ohms.

(4) Replace gear, tighten set screw, and connect jack at PC 583-926.

### 4. SOUND POT:

A. Remove amplifier edge connector PC 583-926.

B. Adjust pot to maximum resistance, (approximately 6.25k ohms) (right handle).

(1) Connect ohm meter between wiper (center lead) and either outside lead.

(2) Loosen set screw and remove gear.

(3) Rotate pot to 6.25k ohms.

(4) Replace gear, tighten set screw, and connect jack at PC 583-926.

### 5. CREDIT BUTTON:

Credit switch must be adjusted to break before make. Failure to adjust switch as indicated will result in permanent damage to Logic Unit (PC 583-904).

### 6. BOOM COUNTER BALANCE WEIGHT:

A. Position dampening pad to its center position.

B. Be sure power control pot is set properly.

C. Position "pitch" control handle to center position.

D. Move "power" control handle to its maximum up position (do this slowly).

E. Helicopter must rise to its maximum up position (boom hits top cap). Adjust weight in or out to have boom hit its stop within the last 10° of handle travel.

F. If the helicopter has a very sensitive control in the vertical flight, the dampening pad may be adjusted up to apply more pressure. NOTE: Any time you re-adjust the dampening pad, you must re-adjust the counter balance weight (Item "E").

MIDWAY MFG. CO.

10750 WEST GRAND AVENUE

FRANKLIN PARK, ILLINOIS

# LAMP & MOTOR REPLACEMENT

LAMP ADJUSTMENT IS ACCOMPLISHED BY FOCUSING THE LENS. THIS IS DONE BY ROTATING THE LENS HOUSING (MARKED "A") INSIDE THE HELICOPTER. TO OBTAIN PROPER FOCUS THE SPOT OF LIGHT SHOULD BE ADJUSTED AT A DISTANCE OF 3" AT THIS DISTANCE THE SPOT OF LIGHT SHOULD BE APPROX. 1" DIA. WITH CLEAR, SHARP EDGES. SEE DETAIL  
NOTE: 3 VOLTS MAX. FOR LAMP

\* REMOVE THESE THREE SCREWS TO OBTAIN ACCESS FOR LAMP REPLACEMENT & ADJUSTMENT.

REMOVE THIS SCREW FOR LAMP REPLACEMENT.  
 REMOVE LAMP SOCKET PULL OLD LAMP OUT & REPLACE WITH MIDWAYS 17-3-129 OR G.E. 253.

NOTE: BE SURE LAMP IS IN THE DETENTED POSITION IN SOCKET.

PROPER MOTOR WIRING  
 CAUTION: IF WIRED INCORRECTLY YOU WILL BURN OUT THE LAMP.

MIDWAY MFG. CO.

# CABINET BREAKDOWN DETAIL

NOTE: In rare cases where doorways are under 34½" (width of cabinet), provisions have been made to disassemble upper parts of cabinet.

## STEP 1:

Remove background scenery "E".

## STEP 2:

Remove front and side viewing glass. Remove top cleats "A" (shown in detail), as well as inside members of front corner brackets "D". In order to remove side glass, the rear wooden retaining members "B" must be taken off.

## STEP 3:

Remove top portion of cabinet. Remove 4 hex. head bolts (2 on each side) from structural members "C" supporting the top. Then the front glass edge retainers should be removed. This will then allow the entire upper portion of the cabinet to be removed. Remember to disconnect the cable quick-disconnect.

## STEP 4:

Remove the four legs. This will then allow the remaining portion of the cabinet to be rotated onto its side and will then fit thru most doorways 28" wide (minimum width).

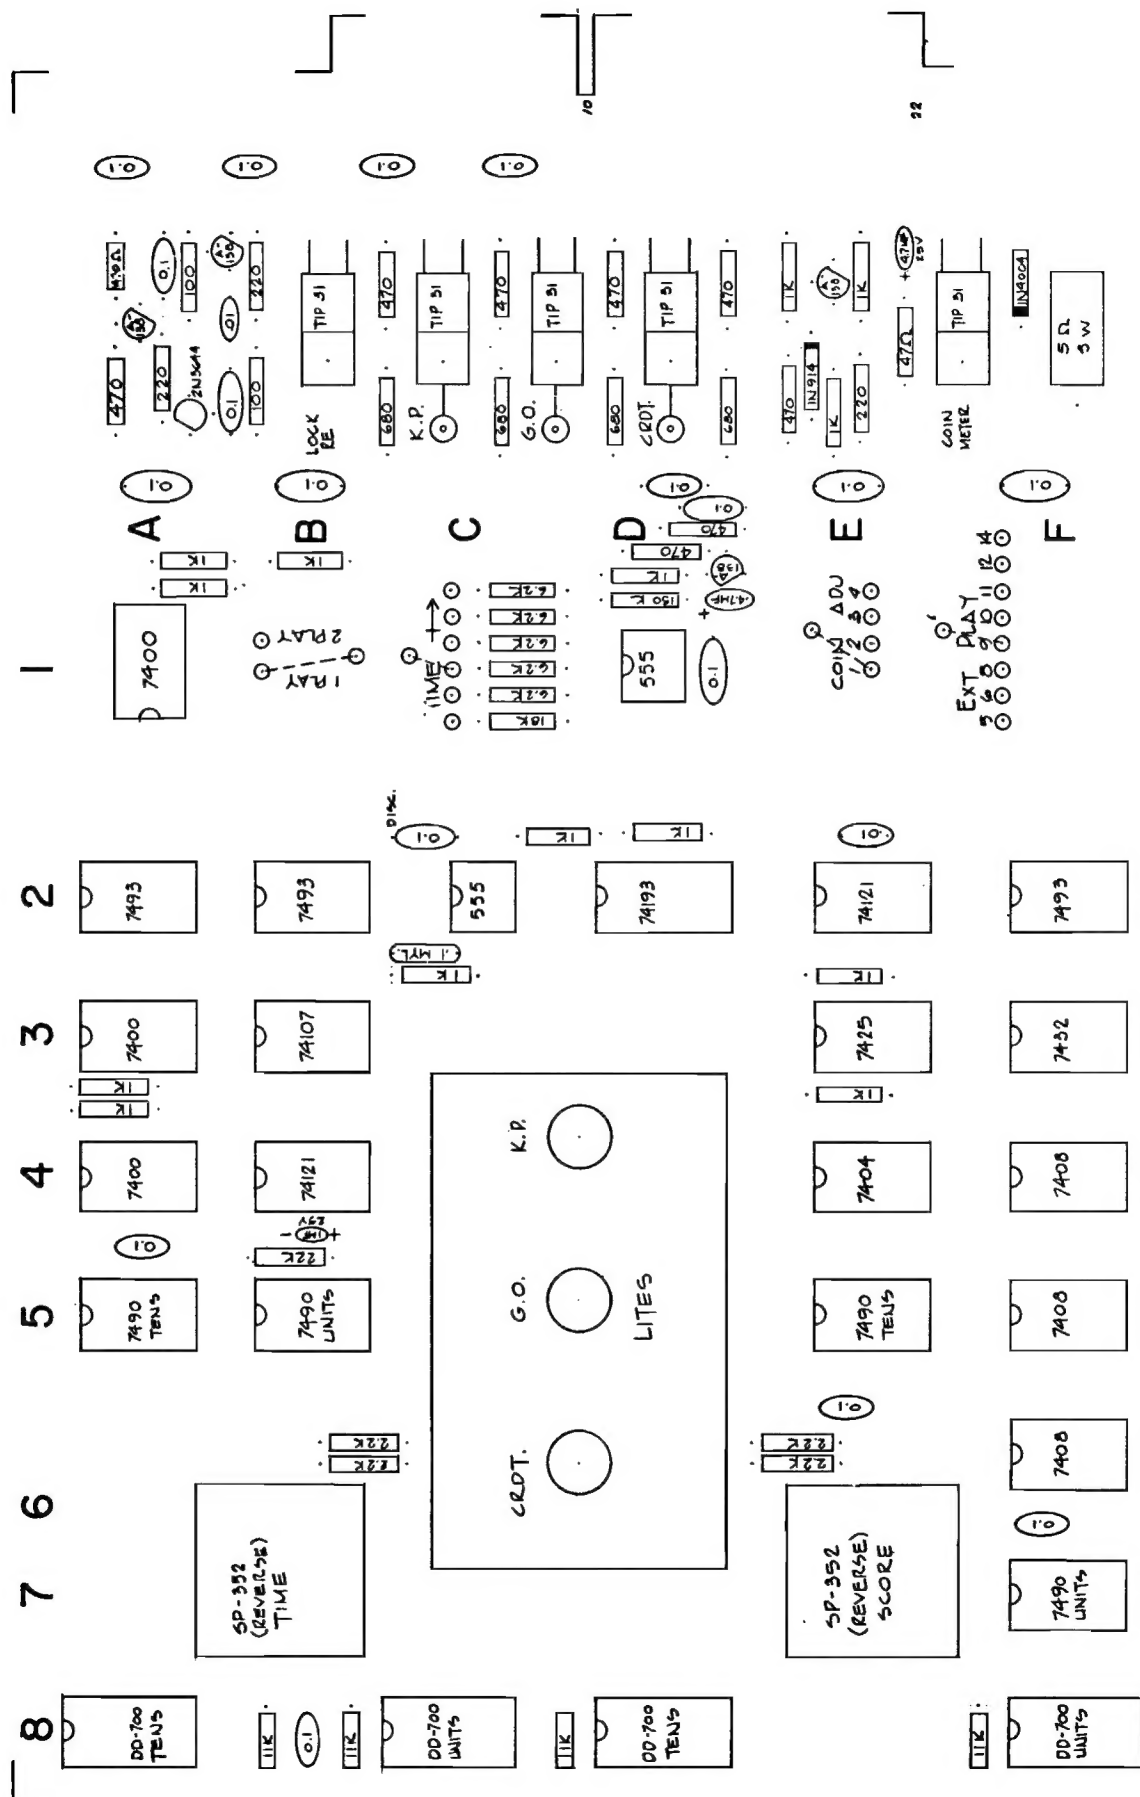

Reverse steps for assembly.
